

# Introduction to Linux Commands

Hou Pong CHAN, Ken

[hpchan@cse.cuhk.edu.hk](mailto:hpchan@cse.cuhk.edu.hk)

CSCI2100A Data Structures Tutorial 5

# Programming Midterm Matters

- The operation system will be Ubuntu, a Linux-based operating system
- You should have basic knowledge in Linux command line

# Outline

- Department Linux Servers
- Basic Commands
- Vim Editor
- gcc
- Testing in PC<sup>2</sup>

# Department Linux Servers

- We recommend Linux14
  - The version of Java is most suitable for PC^2

## ✦ Linux Workstations

Hostname	No. of Processors	RAM	OS	Login	Qty.	Domain	software
linux1	4	12GB	64bit Debian 7	Remote login using SSH only	1	Teaching	
linux2-4	4	12GB	32bit Debian 7	Remote login using SSH only	3	Teaching	
linux5-8	4	12GB	64bit CentOS 7	Remote login using SSH only	4	Teaching	
linux9-12	12	256GB	64bit CentOS 7	Remote login using SSH only	4	Teaching	python / python3.6
linux13,15-16	8	48GB	64bit CentOS 7	Remote login using SSH only	3	Teaching	python / python3.6
linux14	8	32GB	64bit CentOS 7	Remote login using SSH only	1	Teaching	python / python3.6

# Connect to Linux14

- Windows:
  - MobaXterm
    - <https://mobaxterm.mobatek.net/download-home-edition.html>
- Mac:
  - Terminal + Xquartz
  - Xquartz is used to forward the GUI
    - <https://www.xquartz.org>

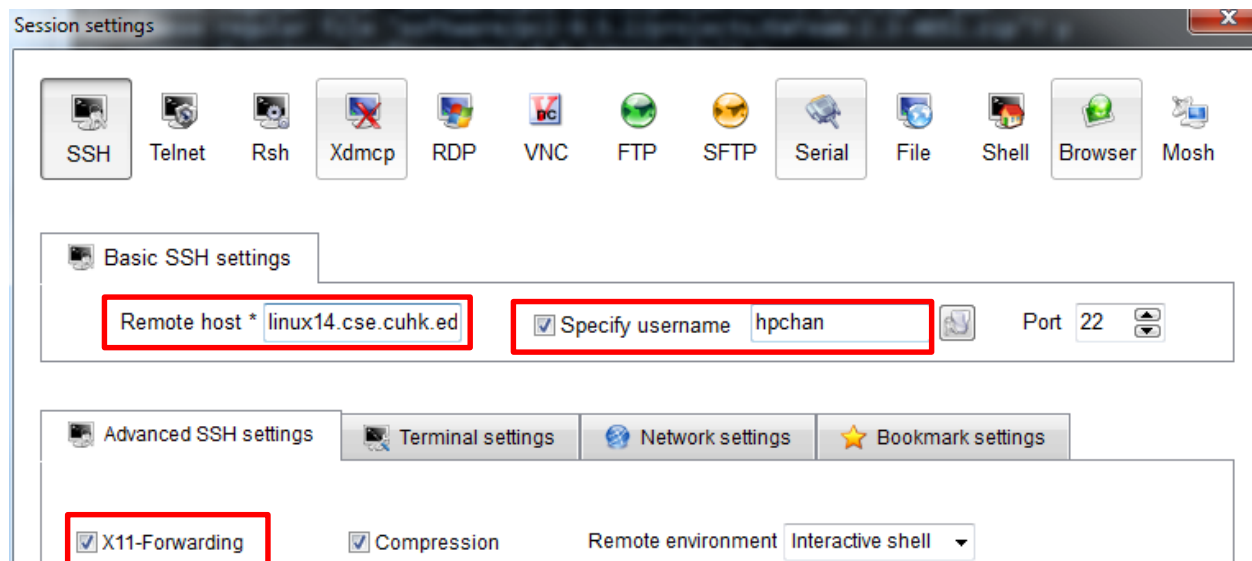

# MobaXterm (Windows)

- Connect to CSE VPN if you are not within CSE network. VPN setup tutorial:
- <https://corner.cse.cuhk.edu.hk/tech/l2tp-ipsec.html>
- Open MobaXterm
- Click the Session button

# MobaXterm (Windows)

- Click SSH button
- Fill in “linux14.cse.cuhk.edu.hk” in Remote host
- Fill in your CSE UNIX username in Specify username
- Click Advanced SSH setting and enable X11-Forwarding
- Click OK and type in your password

# Terminal (Mac)

- Connect to CSE VPN if you are not within CSE network
- Install [Xquartz](#)
- Logout your Mac
- Login your Mac
- Open your terminal
- Type in the following command  
`ssh -X [UNIX user name]@linux14.cse.cuhk.edu.hk`
- Enter password

# Terminal (Mac)

- If you have Host key verification failed
- Type in the following commands
  - cd open ~/.ssh
- Open the known\_hosts file
- Remove the line that starts with  
“linux14.cse.cuhk.edu.hk”

# Basic Linux command

Command	Description
pwd	Display the pathname for the current directory.
ls [options]	List directory contents.
cd directorypath	Change to directory. cd .. to back to the parent directory
cp [options] source destination	Copy files and directories.
rm [options] directory	Remove (delete) file(s) and/or directories. rm -r directory to remove non-empty directory
mkdir [options] directory	Create a new directory.
rmdir [options] directory	Delete empty directories.
mv [options] source destination	Rename or move file(s) or directories.
man [command]	Display the help information for the specified command.
cat [filename]	Display file's contents to the standard output device (usually your monitor).
less [options] [filename]	View the contents of a file one page at a time.

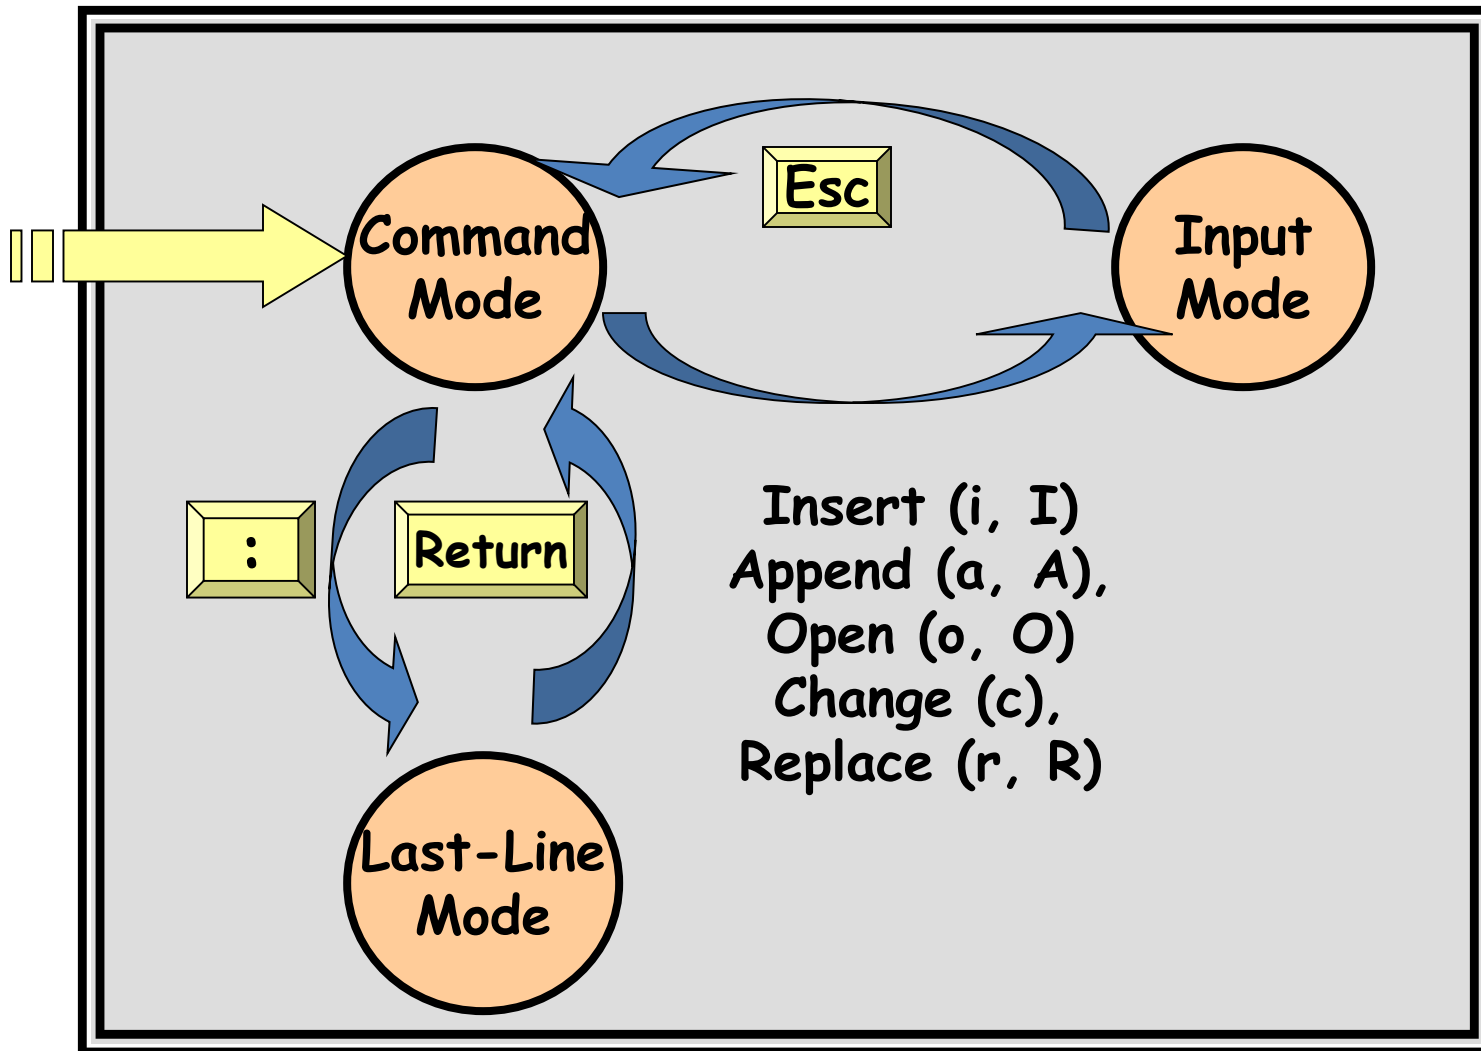

# Online Basic Linux Commands tutorial

- <http://www.dummies.com/how-to/content/common-linux-commands.html>

# The vi Editor

- short for: visual editor
- available on all UNIX systems
  - open source vim (vi improved)  
is part of GNU/Linux
- vi/vim has multiple modes of operation:
  - input mode, command mode, last-line mode
- Command:  
vim [filename]

# vi Editing modes

# VIM TUTORIAL

- Never start something you can't exit
  - To end vi tutorial in the middle of the session, execute the command :q!
  - :q! = quit without saving
  - :wq = write out (save) and quit
- F1 = help
  - or :help
  - :help <command>
  - :q to exit help window

# COMMANDS

- Insert characters
  - i converts to insert mode
  - then type characters
  - backspace to remove characters
  - <esc> to exit insert mode
- Delete characters
  - x deletes character under the cursor
- Motion in command mode:
  - h,j,k,l: left,up,down,right
  - 0,\$: move to begin/end of current line

# COMMANDS

- Insert lines

- o = open line below cursor
- O = open line above cursor
- <esc> to exit insert mode

- Append characters

- A converts to insert mode at end of a line
- then type characters
- <esc> to exit insert mode

# Online Resource

- Tutorial
  - <http://www.openvim.com/>

# Programming Mid-term Matters

- Fortunately, you have a GUI, and a text editor

- But there is no IDE like Visual studio or Xcode
- Still need to command line to debug

# gcc

- gcc is the C compiler developed by GNU project
- Widely adopted as the default compiler of UNIX-like systems

# gcc

- hello.c

```
#include <stdio.h>  
int main()  
{  
    printf("Hello, world!\n");  
    return 0;  
}
```

- Compiling hello.c into an executable file called "hello" is:  
gcc hello.c -o hello
- Execute the executable file "hello":  
./hello

# gcc

- gcc also provides options that help you to optimize or debug your code
- Compile your code with debugging information:

```
gcc -g -o garbage garbage.c
```

- For other optimization/debug options, you may need to check the manual:

```
man gcc
```

# Install PC^2 in Linux14

- Go to your home folder

```
cd ~
```

- Create a software folder

```
mkdir software
```

```
cd software
```

- Download PC^2 (may need to use bash shell)

```
wget https://pc2.ecs.csus.edu/code/v9/pc2-9.6.0-5102/pc2-9.6.0-5102.zip -e use_proxy=yes -e http_proxy=proxy.cse.cuhk.edu.hk:8000 --no-check-certificate
```

# Install PC^2 in Linux14

- Extract the zip  
`unzip pc2-9.6.0-5102.zip`
- Go to the folder  
`cd pc2-9.6.0`
- Edit the pc2v9.ini using vim  
`vim pc2v9.ini`

```
[client]
# Site 1
server=localhost:50002
#server=localhost:50002
# Site 2
#server=localhost:51002
# Site 3
# server=localhost:52002
```

```
[client]
# Site 1
server=137.189.90.245:2606
#server=localhost:50002
# Site 2
#server=localhost:51002
# Site 3
# server=localhost:52002
```

# Install PC^2 in Linux14

- Copy the changed “pc2v9.ini” file into “bin” folder  
`cp pc2v9.ini bin`
- Go to bin folder  
`cd bin`
- Run PC2team  
`./pc2team`

PC^2 version 9.5.2 20170907 4651

   **acm** International Collegiate Programming Contest **IBM** event sponsor

# Test Runs

- Click the **Test** button
- This will make a “**TEST RUN**”, meaning it will compile and execute your program *on the local machine (e.g., linux14), but not the judge!*
- Allow you to select a test case file
- Test your code using **your own test cases, but not the test case on the judge**
- Only available in Linux or Mac

PC^2 Team TEAM 1 (Site 1) [STARTED] Build 1340

# Summary

- Get familiar with Linux environment
- In programming mid-term
  - With GUI and text editor
  - PC<sup>2</sup> already installed
  - Need to debug using GCC and/or the test function of PC<sup>2</sup>

# Appendix of VIM

# COMMANDS

- Deletion
  - d\$ deletes to end of line
  - dw deletes to beginning of next word
  - de deletes to end of current word
  - d + motion
- Using motions for movement
  - Use any of the motions above
  - Use count for repetition
  - 2w = move cursor two words forward
  - 0 = start of line

# COMMANDS

- Using repetition as part of deletion
  - 2dw deletes next two words
- Deleting a line
  - dd = delete line
  - 2dd = delete two lines
- Undo
  - u = undo one command
  - U = restore a line
  - ctrl-R = redo a command

# COMMANDS

- p = put back the deleted text (in new place)
  - one of the delete command above + put = cut-and-paste
- More general cut-and-paste
  - v = start visual mode (start block)
  - move cursor to end of block
  - y = yank (copy to buffer)
  - then p = put in new place

# COMMANDS

- Location
  - ctrl-g = show position in file
  - G = go to bottom of file
  - gg = go to top of file
  - <number>g = go to line <number>

# COMMANDS

- Search
  - /<phrase> = search
  - /<phrase>\c = ignore case
  - ?<phrase> = search backwards
  - n = repeat search
  - N = repeat search in the other direction
- Search for matching parentheses
  - Put cursor on (, [ or {
  - % = go to matching one
  - % = go to first one again

# COMMANDS

- Substitute (replace)
  - `:s/thee/the` = changes first one
  - `:s/thee/the/g` = changes all (global change)
  - `:s/thee/the/gc` = change all with query
  - `:#,#/thee/the/g` = only change within that line range

# vi / vim graphical cheat sheet

**Esc**  
normal  
mode

~ toggle case	! external filter	@. play macro	# prev ident	\$ eol	% goto match	^ "soft" bol	& repeat :s	* next ident	( begin sentence	) end sentence	"soft" bol down	+ next line
\. goto mark	1	2	3	4	5	6	7	8	9	0 "hard" bol	- prev line	= auto <sup>3</sup> format
Q ex mode	W next word	E end word	R replace mode	T back 'till	Y yank line	U undo line	I insert at bol	O open above	P paste before	{ begin parag.	} end parag.	
q record macro	w next word	e end word	r replace char	t 'till	y yank	u undo	i insert mode	o open below	p paste after	[ misc	] misc	
A append at eol	S subst line	D delete to eol	F "back" find ch	G eof/ goto ln	H screen top	J join lines	K help	L screen bottom	. ex cmd line	' reg. <sup>1</sup> spec	bol/ goto col	
a append	s subst char	d delete	f find char	g extra <sup>6</sup> cmds	h ←	j ↓	k ↑	l →	. repeat t/T/f/F	' goto mk. bol	\ not used!	
Z quit <sup>4</sup>	X back-space	C change to eol	V visual lines	B prev WORD	N prev (find)	M screen mid'l	< un- <sup>3</sup> indent	> indent <sup>3</sup>	? find (rev.)			
Z extra <sup>5</sup> cmds	X delete char	c change	v visual mode	b prev word	n next (find)	m set mark	, reverse t/T/f/F	. repeat cmd	/ find			

<b>motion</b>	moves the cursor, or defines the range for an operator
<b>command</b>	direct action command, if <b>red</b> , it enters insert mode
<b>operator</b>	requires a motion afterwards, operates between cursor & destination
<b>extra</b>	special functions, requires extra input
q.	commands with a dot need a char argument afterwards
bol = beginning of line, eol = end of line, mk = mark, yank = copy	
words: quux(foo, bar, baz);	
WORDS: quux(foo, bar, baz);	

## Main command line commands ('ex'):

:w (save), :q (quit), :q! (quit w/o saving)  
:e f (open file f),  
:%s/x/y/g (replace 'x' by 'y' filewide),  
:h (help in vim), :new (new file in vim),

## Other important commands:

CTRL-R: redo (vim),  
CTRL-F/-B: page up/down,  
CTRL-E/-Y: scroll line up/down,  
CTRL-V: block-visual mode (vim only)

## Visual mode:

Move around and type operator to act on selected region (vim only)

## Notes:

- (1) use "x before a yank/paste/del command to use that register ('clipboard') (x=a..z,\*) (e.g.: "ay\$ to copy rest of line to reg 'a')
- (2) type in a number before any action to repeat it that number of times (e.g.: 2p, d2w, 5i, d4j)
- (3) duplicate operator to act on current line (dd = delete line, >> = indent line)
- (4) ZZ to save & quit, ZQ to quit w/o saving
- (5) zt: scroll cursor to top, zb: bottom, zz: center
- (6) gg: top of file (vim only), gf: open file under cursor (vim only)

For a graphical vi/vim tutorial & more tips, go to [www.viemu.com](http://www.viemu.com) - home of ViEmu, vi/vim emulation for Microsoft Visual Studio

# Customizing vim

- Modify the ~/.vimrc file
- Some common syntax
  - set nu
  - set syntax=on
  - set history=1000
